DETAILED ACTION

1. Claims 1-24 were previously examined.
2. Claims 18 and 24 were cancelled.
3. Claims 25-27 were added.
4. Claims 1-17, 19-23, and 25-27 were examined.

Section I: Request for Continued Examination

5. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 12/07/2005 has been entered.

This application is in condition for allowance except for the following formal matters: The disclosure is objected to because of the following missing element numbers: 308, 402, 404, 406, 408, 410, 414, 416.

Prosecution on the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

A shortened statutory period for reply to this action is set to expire **TWO MONTHS** from the mailing date of this letter.

Section II: Allowable Subject Matter

6. Claims 1-17, 19-23, and 25-27 are allowable.

7. The following is an examiner's statement of reasons for allowance:

While US Patent 6,083,269 teaches (claims 1, 10 and 25) a method of simultaneously optimizing performance characteristics in circuits synthesis, comprising the steps of: a) receiving an initial set of design parameters for a circuit to be synthesized; b) invoking a simulation script to determine which synthesis models should be used with the circuit and to set ranges for any test benches; c) generating sets of circuit parameters for each performance characteristic of the circuit; d) automatically creating a plurality of test benches, wherein each of the plurality of test benches emulates test circuitry external to the circuit; e) simultaneously passing in parallel each set of circuit parameters through a circuit model as specified by the simulation script; g) optimizing the circuit synthesis, including receiving the performance measurements for each simulation and determining for which performance characteristics a specifications are met, and, for those analyses where the specifications are not met then generating new circuit parameter values and repeating steps c) through g); and h) outputting the final set of circuit parameters for the circuit, none of these references, taken either alone or in combination, with the prior art of record disclose:

(claims 1 and 25) "simultaneously running in parallel a simulation of each circuit model on the plurality test benches in order to measure performance of the circuit model using the set of circuit parameters,"

(claim 10) " an optimizer that simultaneously passes in parallel each set of circuit parameters through a circuit model as specified by the simulation script,"

in combination with the remaining elements and features of the claimed invention. It is for these reasons that the applicants' invention defines over the prior art of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance".
